Engineering Sound Solutions For A Greener Tomorrow

---

-  **Providing composites for controlling noise and thermal energy**  
Management of thermal energy and environmental noise through custom engineered composites.
-  **Incorporating renewable components into raw materials**  
Through the use of Polyols extracted from renewable sources and from recycled plastics.
-  **Packaging with recycled materials**  
Utilization of recycled cardboard for packaging.
-  **Running an energy-efficient manufacturing facility**  
Entire facility insulated with recycled low emissivity thermal insulation.  
High-efficiency lighting throughout production facility.  
Recycling of all disposed paper products, cans, & bottles.
